

SHELTER IN A DAY...VILLAGE IN A MONTH!

Global Eco Housing is a consortium of companies and an outgrowth of Eco-Panels and Guardian Mobile Systems. We are an assemblage of manufactures supporting innovative solutions for housing, shelter, and disaster relief. Together, we offer value added components to complete a healthy built product with a superior building envelope (walls, floor, roof) in terms of energy efficiency and structural strength. There is no other solution on the market today that combines the low cost, ease of assembly and superior nature of our “Kits”, containerized and deployed directly to your site.

We presently manufacture the most advanced and integrated modular building system on the market today with high volume manufacturing capability.

There is no faster method of construction or pre-engineered structures using low or no-skilled labor. By teaming with reliable, proven manufactures and logistics experts, Global Eco Housing can integrate complimentary building technologies (such as electrical, windows, rainwater harvesting or solar thermal systems) into the panels for greater efficiency.

Global Eco Housing is the market leader for rapidly assembled and highly energy efficient structures.

**shelters - housing - commercial - schools - hospitals - drug stores -
mobile medical trailers
military - command posts - bath facilities - churches - warehouses - cabins
- offices**
